Shah Kar

Birmingham, UK | 07737126947 | Shahkar0215@gmail.com | Portfolio

Software developer with hands-on experience designing, building, testing, and deploying full-stack web applications and REST APIs. Strong background in JavaScript, Java, SQL, and cloud-hosted systems, with a focus on secure, scalable solutions. Committed to continuous learning and passionate about leveraging technology to solve real-world problems.

Technical Skills

Programming Languages: Java, Python, JavaScript, PHP, SQL
Web Development: HTML, CSS, React, Node.js
Database Design: MySQL, Database Optimisation
Tools & Frameworks: Git, REST APIs, Agile methodologies

Projects

Task Manager API (GitHub)

A secure and scalable RESTful API for task management, built with Node.js, Express, and MongoDB

- Implemented secure JWT authentication with role-based access, enabling complete user-specific task segregation across a multi-user REST API
- Developed complete CRUD endpoints using Express with secured routes and admin-level privileges, tested with Postman for robustness
- Deployed the API on AWS EC2 and Heroku with Swagger UI documentation, improving API usability and accessibility for developers
- Secured user data with bcrypt password hashing and validated all endpoints using Postman to ensure compliance with security standards

Fitness Tool **(Live Demo)**

- Built a full-stack fitness web app offering personalised training plans, workout logs, and nutrition info using React, Express, SQL, and REST APIs
- Independently scoped, planned, and delivered the project within deadlines, showcasing project management skills and effective self-organisation
- Engineered responsive front- and back-end architecture using React and Express, enabling smooth user navigation and real-time data updates
- Improved web response times by up to **60%** by compressing images and restructuring code
- Executed unit and integration tests using Jest and Postman, achieving 95%+ test coverage across key UI and API components
- Authored a comprehensive project report covering research findings, system design, user flows, and testing strategy to support academic assessment and documentation standards

AutoMods & Sports4Us **(GitHub)**

- Collaborated with peers to develop full-stack applications, applying software project management principles
- Enhanced understanding of the software lifecycle and teamwork in a technical environment
- Developed fully functional web applications using **HTML, CSS, JavaScript, PHP, SQL, MongoDB, Spring Boot**
- Integrated front-end, backend, and database components, ensuring smooth functionality and user experience

Education

Aston University ***BSc (Hons), Computer Science, [2:1]*** 2021-2024

Relevant modules: Object-Oriented Programming, Data Structures & Algorithms, Software Development, Programming Language Concepts, Information Security, Computer Systems, Individual Project, Team Project

Joseph Chamberlain College 2019-*2021*

A-level Criminology [A] A-level Computer Science [B] BTEC Applied Science [Distinction *]

Waverley Studio College 2017-2019

7 GCSEs 9-4 including English and Maths

Experience

OCS **Event Security Officer** August 2025 – Current

- Ensured the safety of thousands of attendees at arenas, concerts and other high-profile events through proactive crowd monitoring, entrance management and timely issue solutions.
- Resolved situations with professionalism, including interactions with excessively inebriated or compromised individuals, demonstrating exceptional interpersonal abilities, situational awareness and calm problem-solving in high-stress situations.
- Delivered friendly, reliable customer service to thousands of guests per event while successfully functioning in a dynamic, team-oriented environment.

Amazon (Chartwell Logistics) **Delivery Driver** March 2024 – September 2024

- Delivered 200+ parcels daily across 150+ locations using Amazon's routing system, achieving a 9**9% on-time rate** and ensuring **high customer satisfaction**
- Optimised daily delivery routes using the Amazon Flex app, reducing average delivery time by 15% and boosting parcel throughput per shift
- Ensured **95%+ accuracy** in package handling by following strict scanning protocols, resulting in a 30% lower complaint rate compared to the team average
- Prioritised deliveries in high-traffic areas using real-time data to meet tight deadlines and maintain daily targets consistently

FGH & SNSG **Door Supervisor** November 2022 – September 2023

- Led on-site security operations at major events (Commonwealth Games, Glastonbury, Eurovision), ensuring public safety for 10,000+ attendees per event
- Resolved conflicts swiftly by conducting rapid situational assessments and applying active listening strategies, leading to faster issue resolution and team coordination

Domino's **In-store Team Member** Aug 2020 – Feb 2022

- Managed customer service operations, ensuring efficient order processing and addressing inquiries
- Optimised team performance during peak hours, improving productivity and customer satisfaction
- Demonstrated strong time management by balancing work, college, and personal fitness
- Led staff training and optimised scheduling for maximum efficiency

FutureScope Computers **Work Experience** Feb 2018

- Assisted customers in a hardware and software sales environment, gaining insights into computer building and repair

Certifications

Forage

Technology Software Development Job Simulation - Citi *July 2025*

- Completed tasks simulating a real software development environment
- Created a UML state diagram, wrote a feature proposal, queried live web data, and visualised real-time data
- Strengthened practical problem-solving and technical communication skills
- *Verification Code: b8B7Jfnjmy8bFoABn*

Software Engineering Job Simulation - SkyScanner Apr 2025

- Built a Backpack React web app, Dropwizard microservice, and Android flight itinerary app
- Gained hands-on experience in full-stack development and microservices
- *Verification Code: Mkwkbv5Xwq4dPaJdX*

Interests & Achievements

- Committed to continuous learning through online courses and personal tech projects
- Actively follow trends in AI, cloud computing, and software development
